## SOUND ABSORBING MATERIALS & CONSTRUCTION

### **Egg crate acoustic foam**

Egg crate foam provides strong noise reduction and is widely used for sound control in recording studios, vocal booths, and control rooms. The foam also assists with reverberation reduction and echo prevention for clear audio.

### **A sandwich element chassis**

Acoustic sandwich elements are made from fire-safe materials including sheet metal, gypsum board, recycled acoustic foam, and acoustic felt with excellent noise-insulating and noise-absorbing properties.

### **Acoustic absorption panel**

Composed of compressed mineral wool or foam, sound absorbing acoustic panels absorb sound waves to reduce general noise, clarify speech, and limit reverberation in walls within enclosed areas.

## CONVENIENT PORTABLE & EASY TO ASSEMBLE

### **Save time**

The installation of the Acoustic Pod is quick and efficient. You're not waiting for someone to measure, cut, and assemble each panel. The entire pod is made of prefabricated modules and can be easily installed by a small crew within hours.

### **Save space**

The bottom of the Rapidline Acoustic Pods are fitted with 4 heavy-duty castors for easy movement and relocation. When the pod is in the desired position, the castors can be retracted and levelling feet activated.

### **Save cost**

The Rapidline Acoustic Pods save on material costs, labour, delivery, and storage fees, while providing a space for employees to take private phone calls and host meetings in an open office environment without the need to relocate to a larger office building.
